

Optimize your documents with Ocrato

- ✓ Data storage is increasing by a factor of four year-on-year
- ✓ Typically, over one third of documents are duplicates
- ✓ An ALLM survey of organizations found that over 30% of documents are obsolete
- ✓ Migrating obsolete and duplicate content makes migration projects longer and more costly
- ✓ Enterprise search requires documents to have a text layer (using OCR) for them to be discoverable
- ✓ Hyper-compression can reduce large files by over 3000% saving on storage whilst dramatically reducing download times
- ✓ The free version of Ocrato allows you to create unlimited audit reports

The number of documents in an organization are growing at an incredible rate and are becoming difficult and costly to manage. Additionally, over one third of documents are duplicates, obsolete or trivial.

Whether you are looking to reduce IT costs, make workers more efficient or ensure a migration project is a success then a focus on your documents should be at the top of your list.

Ocrato provides a suite of tools to optimize your documents:

- **Optical character recognition** – convert scanned documents and PDF files to a searchable format. Discoverable, smaller, and compliant documents
- **Hyper-compression** – dramatically reduce PDF and image files typically by over 3000%. A 5 Megabyte scanned document reduced to 47 Kilobytes
- **De-duplication** – over one third of files are typically duplicates. Huge savings in storage and revert to a single version of key documents
- **Removal of old or obsolete files** – archive or remove documents that don't add any value

A medium-sized business with 60 TB of stored documents could save £64,172 per year by optimizing their documents

Solve this problem forever

Run a free audit health check of your environment, detailing:

- The number of images or scanned documents which are not searchable
- Duplicated or obsolete documents which are increasing your storage costs
- How much you could save on storage costs with our unique hyper compression feature
